

SAHO – Product Requirements Document (PRD)

Phase 1 – Product Vision & Strategy

Tagline: Your brother through recovery.

Executive Summary

Substance Use Disorders (SUDs) affect millions of people worldwide, yet one of the greatest barriers to recovery is not the absence of treatment—it is the inability to access meaningful support during moments of crisis. Traditional recovery applications expect users to type, search, and make complex decisions exactly when cognitive load is highest. SAHO is a multimodal AI-powered recovery companion designed to reduce cognitive load through voice, vision, and one-touch interactions for individuals and caregivers.

Vision Statement

To become the world's most trusted AI-powered recovery companion that empowers individuals, caregivers, and families through compassionate, accessible, and context-aware assistance during moments when cognitive load is highest.

Mission Statement

To reduce preventable harm caused by substance use disorders by providing intelligent, multimodal interventions that make recovery support available instantly through voice, vision, and simple interactions.

Product Philosophy

Every feature should answer one question: "If the user's own brother were sitting beside them right now, what would they do?"

Design Principles Reduce Cognitive Load Compassion Before Instruction Safety First Accessibility by Default Privacy Builds Trust Support, Never Replace Professionals Target Users Individuals in Recovery Caregivers (parents, siblings, partners, friends) Healthcare Professionals (secondary persona) Primary Goals Provide immediate crisis assistance. Reduce relapse risk. Increase caregiver confidence. Deliver trustworthy educational resources. Build long-term recovery habits. MVP Scope Zero-typing crisis interface Voice AI interaction Caregiver emergency scripts Vision-based trigger and substance identification Recovery timeline Circle of Safety emergency contacts Offline emergency guidance Success Criteria

A person in crisis should be able to receive meaningful support within seconds, avoid typing, understand exactly what to do next, and feel supported rather than judged.
